# **DIGITAL TACHOGRAPH TRAINING**

**SIEMENS VDO, DRIVERS & MANAGERS**

All new vehicles of the categories which had to be equipped with analogue recording equipment in accordance with (EEC) No. 3821/85 and (EEC) No. 3820/85 in the past, require digital recording equipment from 1<sup>st</sup> May 2006.

There is currently no general obligation to retrofit older vehicles.

This change was introduced with the implementation of (EU) Regulation 2135/98 of September 1998 and subsequent EU derived legislation.

The advent of the digital tachograph has seen a great many companies experiencing difficulties when purchasing new vehicles from 1<sup>st</sup> May 2006 fitted with new equipment.

Doncaster GTA is able to offer full training on the use of digital tachograph equipment, incorporating the use of computer software simulation and hands on practical exercises using our state of the art simulator.

The course of training offered can be tailored to individual or company requirements. All training is presented using Power Point and live demonstrations.

The courses are offered in the following formats:

A half-day course aimed at drivers of vehicles and covers the following topics:

The equipment itself i.e. the vehicle unit (VU), KITAS 2 intelligent sensor etc. The use of the driver card, log in procedures, manual entries, printouts etc. Data display, function and menu use etc.

A one-day course aimed at managers covering the above plus:

Use of the company card, company lock-in/lock out procedures, driver and vehicle management, downloading, analysis and archiving of data, periodic inspection, calibration and the other makes of recording equipment.

All courses are RTITB accredited and certified.
